

Designation: B740 – 21

Standard Specification for Copper-Nickel-Tin Spinodal Alloy Strip¹

This standard is issued under the fixed designation B740; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reappraisal. A superscript epsilon (ε) indicates an editorial change since the last revision or reappraisal.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope*

1.1 This specification establishes requirements for copper-nickel-tin alloy strip for Copper Alloy UNS Nos. C72700, C72900, and C72650 in the following alloys:

Copper Alloy UNS No.	Nominal Composition Weight %		
	Copper	Nickel	Tin
C72700	85	9	6
C72900	77	15	8
C72650	87.5	7.5	5

1.2 *Units*—The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.3 The following safety hazard caveat pertains only to the test method(s) described in this specification.

1.3.1 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

B248M Specification for General Requirements for Wrought Copper and Copper-Alloy Plate, Sheet, Strip, and Rolled Bar (Metric)

B598 Practice for Determining Offset Yield Strength in Tension for Copper Alloys (Withdrawn 2019)³

B601 Classification for Temper Designations for Copper and Copper Alloys—Wrought and Cast

B820 Test Method for Bend Test for Determining the Formability of Copper and Copper Alloy Strip

B846 Terminology for Copper and Copper Alloys

E3 Guide for Preparation of Metallographic Specimens

E8/E8M Test Methods for Tension Testing of Metallic Materials

E75 Test Methods for Chemical Analysis of Copper-Nickel and Copper-Nickel-Zinc Alloys (Withdrawn 2010)³

E112 Test Methods for Determining Average Grain Size

E478 Test Methods for Chemical Analysis of Copper Alloys

3. General Requirements

3.1 The following sections of Specification **B248** constitute a part of this specification:

- 3.1.1 Terminology
- 3.1.2 Materials and Manufacture
- 3.1.3 Sampling
- 3.1.4 Number of Tests and Retests
- 3.1.5 Dimensions and Permissible Variations
- 3.1.6 Workmanship, Finish, and Appearance
- 3.1.7 Significance of Numerical Limits
- 3.1.8 Inspection
- 3.1.9 Rejection and Rehearing
- 3.1.10 Certification
- 3.1.11 Test Reports
- 3.1.12 Packaging and Package Marking

3.2 In addition, when a section with a title identical to that referenced in 3.1, above, appears in this specification, it contains additional requirements that supplement those appearing in Specification **B248**.

³ The last approved version of this historical standard is referenced on www.astm.org.

*A Summary of Changes section appears at the end of this standard

4. Terminology

4.1 For definitions of terms related to copper and copper alloys, refer to Terminology **B846**.

5. Ordering Information

5.1 Include the following specified choices when placing orders for product under this specification, as applicable:

- 5.1.1 ASTM designation and year of issue,
- 5.1.2 Copper Alloy UNS No.;
- 5.1.3 Quantity;
- 5.1.4 Temper **(8.1)**;
- 5.1.5 Dimensions: thickness and width, and length, if applicable;
- 5.1.6 How furnished: rolls or coils, stock lengths with or without ends, specific lengths with or without ends; and
- 5.1.7 Type of edge other than slit, for example, rounded corners, rounded edges, or full-rounded edges.

5.2 The following options are available and, when required, shall be specified at the time of placing of the order.

- 5.2.1 Certification,
- 5.2.2 Test report, and
- 5.2.3 If product is purchased for agencies of the U.S. government, see the Supplementary Requirements Section of Specification **B248** or Specification **B248M**.

6. Materials and Manufacture

6.1 Materials:

6.1.1 The material of manufacture shall be strip of Copper Alloy UNS No. C72650, C72700, or C72900 of such purity and soundness as to be suitable for the products prescribed herein.

6.2 Manufacture:

6.2.1 The product shall be manufactured by such hot working, cold working, and thermal treatment processes as to produce a uniform wrought structure in the finished product.

6.2.2 Solution-heat-treatment or solution-heat-treated and cold-worked material is normally spinodal hardened by the purchaser after forming or machining.

6.2.3 Mill-hardened products have been spinodal heat treated by the manufacturer. Further thermal treatment is not normally required.

7. Chemical Composition

7.1 The material shall conform to the chemical composition requirements specified in **Table 1** for the copper alloy UNS No. specified in the ordering information.

7.2 These composition limits do not preclude the presence of other elements. By agreement between the manufacturer and purchaser, limits may be established and analysis required for unnamed elements.

7.3 For alloys in which copper is listed as “remainder,” copper is the difference between the sum of results of all elements determined and 100 %. When all the elements in **Table 1** are determined, the sum of results shall be 99.7 % min.

8. Temper

8.1 The standard tempers for products described in this specification are given in **Table 2**, **Table 3**, and **Table 4**.

- 8.1.1 TB00 (Solution Heat Treated).
- 8.1.2 TD01 to TD12 (Solution Heat Treated with varying degrees of cold working).
- 8.1.3 TX00 (Spinodal Hardened).
- 8.1.4 TS01 to TS12 (Hard and Spinodal Hardened).
- 8.1.5 TM00 to TS08 (Mill Hardened).

8.2 Special combinations of properties may be obtained by special heat treatments. These requirements shall be agreed upon by the manufacturer or supplier and purchaser.

9. Grain Size for Annealed Tempers

9.1 Grain size shall be the standard requirement for product over 0.010 in. (0.25 mm) in thickness for tempers TB00, TX00, and TM00.

9.2 Acceptance or rejection based upon grain size shall depend only on the average grain size of a test specimen taken from each of two sample portions, and each specimen shall not exceed the limits prescribed in **Table 5** when tested in accordance with Test Methods **E112**.

9.3 Grain size shall be determined in a plane perpendicular to the surface.

10. Mechanical Property Requirements

10.1 Tensile Strength Requirements:

10.1.1 The solution heat-treated or solution heat-treated and cold-worked material shall conform to the tensile property requirements specified in **Table 2**, when tested in accordance with Test Methods **E8/E8M**.

10.1.2 The spinodal heat-treated material shall conform to the tensile property requirements specified in **Table 3**.

10.1.2.1 Special combinations of properties such as increased ductility, electrical conductivity, dimensional accuracy, endurance life, improved stress relaxation resistance, resistance to elastic drift, and hysteresis in springs may be obtained by

TABLE 1 Chemical Requirements

Copper Alloy UNS No.	Previous Designation	Copper, incl. Silver	Composition, %							
			Lead, ^A max	Iron, ^A max	Zinc, ^A max	Nickel, incl. Cobalt	Tin	Manganese, ^A max	Niobium, ^A max	Magnesium, ^A max
C72650	Cu-7.5Ni-5Sn	remainder	0.01	0.10	0.10	7.0–8.0	4.5–5.5	0.10	...	...
C72700	Cu-9Ni-6Sn	remainder	0.02 ^B	0.50	0.50	8.5–9.5	5.5–6.5	0.05–0.30	0.10	0.15
C72900	Cu-15Ni-8Sn	remainder	0.02 ^B	0.50	0.50	14.5–15.5	7.5–8.5	0.30	0.10	0.15

^A The total of the elements Pb, Fe, Zn, Mn, Nb, and Mg not to exceed 0.7 %.

^B 0.005 % Pb, max for hot rolling.
