

Designation: B997 – 16 (Reapproved 2021)

Standard Specification for Zinc-Aluminum Alloys in Ingot Form for Hot-Dip Coatings¹

This standard is issued under the fixed designation B997; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification covers certain zinc-aluminum (Zn-Al) alloys in ingot form for re-melting for use in the production of hot-dip coatings on steel. Alloy compositions are specified below and in [Table 1](#).

ASTM	Common	UNS
Type 5	95/5 Zn/Al	Z30507
Type 10	90/10 Zn/Al	Z30600
Type 15	85/15 Zn/Al	Z30706

NOTE 1—The zinc-aluminum alloys in Specification B997 are intended to be used primarily to create a molten zinc-aluminum bath and differ from the master alloys in Specification [B860](#) which are intended primarily to adjust the concentration of certain elements in molten zinc galvanizing baths.

1.2 The values stated in inch-pound units are to be regarded as standard. The values given in parentheses are mathematical conversions to SI units that are provided for information only and are not considered standard.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.*

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

2. Referenced Documents

2.1 The following documents of the issue in effect on date of order acceptance form a part of this specification to the extent referenced herein:

2.3 ISO Standards:³

[ISO 3815-1](#) Zinc and zinc alloys — Part 1: Analysis of solid samples by optical emission spectrometry

[ISO 3815-2](#) Zinc and zinc alloys — Part 2: Analysis by inductively coupled plasma optical emission spectrometry

3. Terminology

3.1 Terminology:

3.1.1 *Type 5, n*—95 % zinc – 5 % aluminum alloy.

3.1.2 *Type 10, n*—90 % zinc – 10 % aluminum alloy.

3.1.3 *Type 15, n*—85 % zinc – 15 % aluminum alloy.

3.2 Abbreviations:

3.2.1 *95/5 Zn/Al*—95 % zinc – 5 % aluminum alloy.

3.2.2 *90/10 Zn/Al*—90 % zinc – 10 % aluminum alloy.

3.2.3 *85/15 Zn/Al*—85 % zinc – 15 % aluminum alloy.

¹ This specification is under the jurisdiction of ASTM Committee [B02](#) on Nonferrous Metals and Alloys and is the direct responsibility of Subcommittee [B02.04](#) on Zinc and Cadmium.

Current edition approved Nov. 1, 2021. Published December 2021. Originally approved in 2015. Last previous edition approved in 2016 as B997 – 16^{ε1}. DOI: 10.1520/B0997-16R21.
