

Designation: D4389/D4389M – 23

Standard Specification for Finished Glass Fabrics Woven From Rovings¹

This standard is issued under the fixed designation D4389/D4389M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 This specification primarily covers glass fabrics woven from “E” electrical continuous glass fiber rovings that are intended primarily as a reinforcing material in laminated plastics for structural use.

1.2 This specification specifies the terminology, definitions, general requirements, and physical requirements for woven roving glass fiber fabrics. This specification permits the application of sizing materials to the glass fiber roving during manufacture that helps facilitate weaving. When used as permitted in this specification, such materials are compatible with the resin matrix as specified in the contracting instrument.

NOTE 1—Sizing materials on glass fiber yarns, in most cases, are removed by various cleaning procedures as a first stage in preparing a finished fabric. When these yarn sizing materials are removed during a cleaning procedure, they need not be compatible with the subsequent resin matrix.

1.3 *Units*—The values stated in either SI units or inch-pound units are to be regarded as standard. The values stated in each system are not exact equivalents; therefore, each system shall be used independently of the other. Combining values from the two systems will result in nonconformance with the standard.

NOTE 2—This specification is one of a series to provide a substitute for the following Military Specifications:

MIL-Y-1140H Yarn, Cord, Sleaving, Cloth, and Tape-Glass
MIL-C-9084C Cloth, Glass Finished for Resin Laminates
MIL-C-19663C Cloth, Glass, Woven Roving for Plastic Laminates

1.4 *This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.*

¹ This specification is under the jurisdiction of ASTM Committee D13 on Textiles and is the direct responsibility of Subcommittee D13.18 on Glass Fiber and its Products.

Current edition approved June 1, 2023. Published August 2023. Originally approved in 1984. Last previous edition approved in 2016 as D4389 –16. DOI: 10.1520/D4389_D4389M-23.

3. Terminology

3.1 For definitions of glass fiber and product terms used in this specification refer to Terminology D7018/D7018M.

3.1.1 The following terms are relevant to this standard: *continuous filament yarn, roving*.

3.2 For definitions of other textile terms used in this specification, refer to Terminology D123.

CLASSIFICATION

4. Classification

4.1 *Designation of Woven Roving Fabric*— The basic designations for glass woven roving fabric is by mass per unit area and is given in grams per square metre (ounces per square yard). Historically, an ASTM type number has been used by the industry. These numbers have been sequentially assigned as new woven roving constructions as they were added to this specification. Numbers 1 through 10 are shown in Table 1 with the relationship to mass per unit area and fabric count.

REQUIREMENTS

5. Material

5.1 The roving shall be continuous filament fiber, free of any free alkali, such as sodium or potassium metal salts and foreign particles, dirt, and other impurities. It shall be an E type glass as defined in Specification D578/D578M.

5.1.1 The fabric shall be uniformly woven, have uniform color, overall cleanness, and no objectionable odor.

6. Fabric Count

6.1 For woven roving fabrics listed in Table 1, the average fabric count shall conform to the requirements of Table 1. For

woven roving fabrics not listed in Table 1, the average fabric count shall be agreed upon between the purchaser and the supplier.

7. Yarn Designations

7.1 For woven roving fabrics, the roving designations shall be as agreed upon between the purchaser and the supplier. The requirements of the individual elements of the designation are specified in Sections 8 – 10.

8. Yarn Number

8.1 For woven roving fabrics listed in Table 1, the average size-free yarn numbers of the yarns designated shall conform to the requirements of Table 1. For woven roving fabrics not listed in Table 1, the average size-free yarn numbers shall be agreed upon between the purchaser and the supplier.

9. Filament Diameter

9.1 The range of values for the filament diameters are listed in Table 2. The average filament diameter for the rovings in the woven roving fabric shall be within the interval listed in Table 2.

10. Strand Construction

10.1 The construction of the component strands shall be agreed upon between the purchaser and the supplier.

11. Weave Type

11.1 For woven roving fabrics listed in Table 1, the weave type shall be plain weave. For woven roving fabrics not listed in Table 1, the weave type shall be agreed upon between the purchaser and the supplier.

12. Mass per Unit Area

12.1 For woven roving fabrics listed in Table 1, the average mass per unit area shall conform to the requirements of Table 1. For woven roving fabrics not listed in Table 1, the average mass per unit area shall be agreed upon between the purchaser and the supplier. The average mass per unit area for the lot shall

^A In some cases, the fill yarn may be woven as 2 picks per shed and as 1 fill yarn. The basic roving length per unit area used to produce the above fill yarns should be doubled.
