

BRITISH STANDARD

**BS 2000 :
Part 381 : 1997
ISO 3648 : 1994**

Methods of test for

Petroleum and its products

**Part 381. Aviation fuels - Estimation of net
specific energy**

(Identical with IP 381/97)

National foreword

This British Standard was published under the authority of the Materials and Chemicals Sector Board and comes into effect on 1st March 1997. It is identical with ISO 3648 : 1994, amended in accordance with Technical Corrigendum 1 (Cor.1:1996). ISO 3648 was prepared by Technical Committee 28, Petroleum products and lubricants, of the International Organization for Standardization (ISO).

This British Standard supersedes BS 2000 : Part 381 : 1995, which is withdrawn.

BS 2000 comprises a series of test methods for petroleum and its products that are published by the Institute of Petroleum (IP) and have been accorded the status of a British Standard. Each method should be read in conjunction with the preliminary pages of 'IP Standard methods for analysis and testing of petroleum and related products and British Standard 2000 Parts' which gives details of the BSI/IP agreement for publication of the series, provides general information on safety precautions, sampling and other matters, and lists the methods published as Parts of BS 2000.

Under the terms of the agreement between BSI and the Institute of Petroleum, the revised version of BS 2000 : Part 381 will be published by the IP (in 'Standard methods for analysis and testing of petroleum and related products and British Standard 2000 Parts' and as a separate publication). The numbering of the Parts of BS 2000 follows that of the corresponding IP methods. BS 2000 : Part 381 : 1997 is thus identical with IP 381/97.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
