

Analysis of formulated detergents —

Part 3: Quantitative test methods —

Section 3.7 Method for determination of total non-ionic matter content

NOTE It is recommended that this Section be read in conjunction with the information in the “General Introduction”, published separately as BS 3762-0.

UDC 661.185:543

Confirmed November 2008

Foreword

This Section of BS 3762 has been prepared under the direction of the Chemicals Standards Committee and supersedes method C1 of BS 3762:1964 in so far as it applies to formulated detergents, but that method will continue to exist until a British Standard for the determination in surface active agents (raw materials) has been published.

This standard describes a method of test only and should not be referred to as a specification defining limits of purity. Reference to the standard should indicate that the method of test used is in conformity with BS 3762-3.7.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 and 2, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Amendments issued since publication

Amd. No.	Date of issue	Comments

This British Standard, having been prepared under the direction of the Chemicals Standards Committee, was published under the authority of the Board of BSI and comes into effect on 30 September 1986
