Valves for hydraulic fluid power systems

Part 2. Methods for determining performance

Distributeurs pour transmissions hydrauliques

Partie 2. Méthodes de détermination des caractéristiques de fonctionnement

Ventile für fluidtechnische Systeme

Teil 2. Verfahren zur Bestimmung der Leistung

Contents

	Page		Page
National foreword	1	3 Transient characteristics for operation of directional control valves — Relationship between displacement and time	15
Committees responsible	Back cover	4 Transient characteristics for operation of directional control valves — Relationship between pressure and time	15
Method		5 Test circuit for direct-acting non-return valves	16
0 Introduction	2	6 Test circuit for leakage flow of direct-acting non-return valves	16
1 Scope and field of application	2	7 Test circuit for pilot-pressure-operated non-return valves	17
2 References	2	8 Test circuit for pressure-relief valves	18
3 Definitions	2	9 Test circuit for pressure-reducing valves	19
4 Symbols and units	3	10 Test circuit for flow control valves (meter-in and three-way bleed-off)	20
5 Test installation — General requirements	3	11 Test circuit for flow control valves (meter-out)	21
6 General test conditions	3	12 Test circuit for flow control valves (bleed-off)	22
7 Test procedure for directional control valves	5	13 Test circuit for flow-dividing valves	23
8 Test procedure for non-return (check) valves	6	14 Graphical representation of pressure/flow characteristics of pilot-pressure-operated non-return valves	24
9 Test procedure for valves controlling pressure	7	15 Graphical representation of pilot pressures p_x permitting flow from port B to port A	24
10 Test procedure for flow control valves	8	16 Graphical representation of steady-state pressure/flow characteristics for pressure-relief valves	25
11 Test procedure for flow-dividing valves	9	17 Graphical representation of transient response of valve controlling pressure	26
12 Test report	10	18 Graphical representation of steady-state flow characteristics of a flow control valve	27
13 Identification statement	12	19 Graphical representation of transient response of flow control valves	28
Annexes			
A Classes of measurement accuracy	29		
B Use for practical units	30		
Tables			
1 Symbols and units	3		
2 Limits of permissible variation of mean indicated values of controlled parameters	4		
3 Output pressure conditions	9		
4 Permissible systematic errors of measuring instruments as determined during calibration	29		
5 Practical units	30		
Figures			
1 Test circuit for directional control valves	13		
2 Switching envelope for directional control valves	14
