

BSI Standards Publication

Cold formed welded steel structural hollow sections

Part 2: Tolerances, dimensions and sectional properties

National foreword

This British Standard is the UK implementation of EN 10219-2:2019. It supersedes BS EN 10219-2:2006, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee ISE/103, Structural Steels Other Than Reinforcements.

A list of organizations represented on this committee can be obtained on request to its secretary.

The UK committee draws users' attention to the fact that EN 10219-2:2006 is included in the normative references of BS EN 10219-1:2006. Furthermore, at the time of publication of this standard, EN 10219-1:2006 is cited in the Official Journal of the European Union (OJEU) under EU Directive 89/106/EEC (CPD) Construction products (CPD/CPR).

For CE marking purposes under the CPD/CPR, the UK committee advises users that when a standard is included in the normative references of a standard cited in the OJEU, it continues to be used for CE marking until the citation in the OJEU is revised. In the case of this standard, therefore, users should continue to refer to EN 10219-2:2006 for CE marking purposes under the CPD/CPR until the citation of EN 10219-1:2006 in the OJEU is revised.

For further information, see www.ec.europa.eu/growth/single-market/european-standards/harmonised-standards/construction-products_en.

In addition to the main changes with respect to the previous edition listed in the European foreword, the UK committee also draws users' attention to the following changes:

- Clarification of the tolerances to be used for elliptical hollow sections (new column in Table 2)
- Clarification of the measurement of twist of elliptical hollow sections (new Figure 7)

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
