

Devices to prevent pollution by backflow of potable water — Pressurised air inlet valves DN 15 to DN 50 — Family L, type A and type B

The European Standard EN 14455:2005 has the status of a
British Standard

ICS 13.060.20; 23.060.01

National foreword

This British Standard was published by BSI. It is the UK implementation of EN 14455:2005.

The UK participation in its preparation was entrusted by Technical Committee B/504, Water supply, to Subcommittee B/504/4, Backflow prevention.

A list of organizations represented on B/504/4 can be obtained on request to its secretary.

Attention is drawn to the requirement in 10.12 to not remove the test sample from the test rig (Figure 8) whilst conducting the repeated test of 10.7. BSI Technical Committee B/504 is of the opinion that the test rig of 10.7 (Figure 6) should be modified to connect it to the vacuum line of Figure 8 whilst maintaining the essential pipe length “*L*” defined in Figure 6.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

This British Standard was published under the authority of the Standards Policy and Strategy Committee on 31 October 2006
