raising standards worldwide™

National foreword

This British Standard is the UK implementation of EN 50110-2:2010. It supersedes BS EN 50110-2:1997 which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee PEL/99, Erection and operation of power installations.

A list of organizations represented on this committee can be obtained on request to its secretary.

The UK committee would like to draw the attention of users to two additional entries for the UK (see subclauses 30.1 and 30.2), which have been submitted to CENELEC for incorporation into the EN text. These are reproduced here for the users information in the interim.

Laws and Regulations

The Electricity Safety, Quality and Continuity (Amendment) Regulations 2006

These Regulations amend and extend the scope of the Electricity Safety, Quality and Continuity Regulations 2002. The amendments include:

- A. The requirement to update BS 7671 and to recognize the harmonization of cable core colours across the EU.
- B. Clarification that tramways, trolley vehicle systems and other forms of guided transport are afforded the same exemptions from the application of the ESQCR as is the case for railways.
- C. The need to improve the current duty of generators and distributors to maintain sufficient clearance between overhead electricity lines and trees in order to avoid danger to the public.
- D. The extension of the scope of the ESQCR to the UK Renewable Energy Zone ('REZ') and to territorial waters adjacent to Great Britain.

Standards

BS 7354:1990, *Code of practice for design of high-voltage open-terminal stations*

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
