Information technology – Measurement of end-to-end (E2E) links

National foreword

This British Standard is the UK implementation of EN 50697:2019.

This standard references informative test limits from international Technical Reports only. It has been produced as a placeholder for a second edition.

The second edition, expected in late 2020 or early 2021, will have a wider scope, supporting a future CENELEC design standard containing additional requirements for end-to-end links, direct attach cabling and modular plug terminated links.

The UK participation in its preparation was entrusted to Technical Committee TCT/7, Telecommunications - Installation requirements.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
