

Exposure to electric or magnetic fields in the low and intermediate frequency range — Methods for calculating the current density and internal electric field induced in the human body —

Part 2-1: Exposure to magnetic fields — 2D models

The European Standard EN 62226-2-1:2005 has the status of a British Standard

ICS 17.220.20

National foreword

This British Standard is the official English language version of EN 62226-2-1:2005. It is identical with IEC 62226-2-1:2004.

The UK participation in its preparation was entrusted to Technical Committee GEL/106, Human exposure to Lf and Hf Electromagnetic radiation, which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 56, an inside back cover and a back cover.
