

# Methods of test for ancillary components for masonry —

## Part 8: Determination of load capacity and load-deflection characteristics of joist hangers

The European Standard EN 846-8:2000, incorporating amendment A1:2006, has the status of a British Standard

ICS 91.080.30

# National foreword

This British Standard is the official English language version of EN 846-8:2000, incorporating amendment A1:2006, which is included in a package of new European Standards being prepared by CEN/TC 125 relating to ancillary components for masonry — ties, straps, hangers and brackets. Although the English language versions of these European Standards will be adopted as British Standards as they become available, the existing British Standards for joist hangers will be retained, but only until such time that the complete package of European Standards becomes available. Any residue(s) from British Standards affected by the package which need to be retained, will be drawn together to form a new BS. The original group of British Standards will then be withdrawn and this will be notified in *Update Standards*.

The UK participation in its preparation was entrusted by Technical Committee B/519, Masonry and associated tests, to Subcommittee B/519/3, Ancillary components.

A list of organizations represented on B/519/3 can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

**Compliance with a British Standard cannot confer immunity from legal obligations.**

This British Standard, having been prepared under the direction of the Sector Committee for Building and Civil Engineering, was published under the authority of the Standards Committee and comes into effect on 15 June 2000
