Clay geosynthetic barriers — Determination of permeability to gases (ISO 10773:2011)

National foreword

This British Standard is the UK implementation of EN ISO 10773:2011.

At Formal Vote, the UK National Committee B/553 abstained from voting because it could not achieve consensus over whether the test is reproducible and repeatable, and whether Nitrogen should be replaced as a test gas by Methane or Carbon Dioxide.

The UK participation in its preparation was entrusted to Technical Committee B/553, Geotextiles and geomembranes.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.
