Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10257 pertaining to face protectors and visors for ice hockey players was prepared by Technical Committee ISO/TC 83, *Sports and recreational equipment*, Subcommittee SC 5, *Ice hockey equipment and facilities*.

It is the first International Standard for ice hockey face protectors and visors, and therefore, neither cancels nor supersedes any previous documents. It was developed primarily from face protector standards for ice hockey players previously published by the American Society of Testing and Materials (ASTM), the Canadian Standards Association (CSA) and the Swedish Ice Hockey Association (SIF).

Annexes A to D of this International Standard are for information only.
