# INTERNATIONAL STANDARD

**ISO  
10291**

First edition  
1994-09-15

---

## **Glass in building — Determination of steady-state $U$ values (thermal transmittance) of multiple glazing — Guarded hot plate method**

*Verre dans la construction — Détermination du coefficient de transmission  
thermique  $U$ , en régime stationnaire des vitrages multiples — Méthode  
de la plaque chaude gardée*

Reference number  
ISO 10291:1994(E)

## **Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10291 was prepared by Technical Committee ISO/TC 160, *Glass in building*, Subcommittee SC 2, *Use considerations*.
