Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 10782-1 was prepared by Technical Committee ISO/TC 72, *Textile machinery and machinery for dry-cleaning and industrial laundering*.

ISO 10782 consists of the following parts, under the general title *Definitions and attributes of data elements for control and monitoring of textile processes*:

- *Part 1: Spinning, spinning preparatory and related processes*
- *Part 2: Fabric manufacturing*
- *Part 3: Fabric processing*

Annexes A and B form an integral part of this part of ISO 10782. Annexes C and D are for information only.
