
Extruded sheets of polyethylene (PE-HD) — Requirements and test methods

*Plaques extrudées en polyéthylène (PE-HD) — Prescriptions et méthodes
d'essai*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 14632 was prepared by the European Committee for Standardization (CEN) in collaboration with ISO Technical Committee TC 61, *Plastics*, Subcommittee SC 11, *Products*, in accordance with the Agreement on technical cooperation between ISO and CEN (Vienna Agreement).

Throughout the text of this standard, read "... this European Standard ..." to mean "... this International Standard ...".

Annex A forms an integral part of this International Standard.
