Threaded fasteners — Axial load fatigue testing — Test methods and evaluation of results

*Éléments de fixation filetés — Essais de fatigue sous charge axiale —
Méthode d'essai et évaluation des résultats*

Reference number
ISO 3800:1993(E)

ISO 3800:1993(E)**Foreword**

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 3800 was prepared by Technical Committee ISO/TC 2, *Fasteners*, Subcommittee SC 1, *Mechanical properties of fasteners*.

This first edition of ISO 3800 cancels and replaces ISO 3800-1:1977, which has been technically revised.
