Road vehicles — Hydraulic pressure test connection for braking equipment

Véhicules routiers — Raccords de contrôle de pression pour systèmes de freinage hydraulique

Second edition — 1984-12-15

UDC 621.646.6 : 629.11-592.2

Ref. No. ISO 3803-1984 (E)

Descriptors : road vehicles, braking systems, hydraulic brakes, pressure taps, dimensions.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 3803 was prepared by Technical Committee ISO/TC 22, *Road vehicles*.

ISO 3803 was first published in 1976. This second edition cancels and replaces the first edition, the following clauses of which have been revised technically:

- clause 4 (illustration deleted);
- new clause 6.
