

INTERNATIONAL STANDARD

ISO
3830

Third edition
1993-10-01

Petroleum products — Determination of lead content of gasoline — Iodine monochloride method

*Produits pétroliers — Détermination de la teneur en plomb de
l'essence — Méthode au monochlorure d'iode*

Reference number
ISO 3830:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 3830 was prepared by Technical Committee ISO/TC 28, *Petroleum products and lubricants*.

This third edition cancels and replaces the second edition (ISO 3830:1981), which has been technically revised.
