Metallic powders — Determination of green strength by transverse rupture of rectangular compacts

Poudres métalliques — Détermination de la résistance de comprimés rectangulaires à cru

Second edition — 1985-07-01

UDC 621.762:620.17

Ref. No. ISO 3995-1985 (E)

Descriptors : powder metallurgy, metallic powder, compressed products, tests, determination, green strength, test equipment.

Price based on 5 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 3995 was prepared by Technical Committee ISO/TC 119, *Powder metallurgy*.

ISO 3995 was first published in 1977. This second edition cancels and replaces the first edition, of which it constitutes a minor revision.
