Cheese — Determination of nitrate and nitrite contents — Method by cadmium reduction and photometry

Fromages — Détermination des teneurs en nitrates et en nitrites — Méthode par réduction au cadmium et photométrie

Second edition — 1984-09-15

UDC 637.3 : 543.846 : 546.173/.175

Ref. No. ISO 4099-1984 (E)

Descriptors : agricultural products, dairy products, cheeses, chemical analysis, determination of content, nitrates, nitrites, molecular absorption spectrometry.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 4099 was prepared by Technical Committee ISO/TC 34, *Agricultural food products*.

ISO 4099 was first published in 1978. This second edition cancels and replaces the first edition, of which it constitutes a minor revision.

NOTE — The method specified in this International Standard has been developed jointly with the IDF (International Dairy Federation) and the AOAC (Association of Official Analytical Chemists, USA). The text as approved by the above organizations will also be published by FAO/WHO (Code of Principles concerning Milk and Milk Products and Associated Standards), by the IDF and by the AOAC (Official Methods of Analysis).
