Acid-grade and ceramic-grade fluorspar — Determination of sulfide content — Iodometric method

*Spaths fluor pour la fabrication de l'acide fluorhydrique et spaths fluor utilisables dans
l'industrie céramique — Dosage des sulfures — Méthode iodométrique*

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 4284 was prepared by Technical Committee ISO/TC 175, *Fluorspar*.

This second edition cancels and replaces the first edition (ISO 4284 : 1978), of which it constitutes a minor revision. The scope has been extended to include ceramic-grade fluorspar, and an annex has been added giving the results of comparative tests.

Annex A of this International Standard is for information only.
