

Manganese ores and concentrates — Determination of phosphorus content — Extraction-molybdovanadate photometric method

Minerais et concentrés de manganèse — Dosage du phosphore — Méthode photométrique au molybdovanadate avec extraction

First edition — 1982-08-15

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4293 was developed by Technical Committee ISO/TC 65, *Manganese and chromium ores*, and was circulated to the member bodies in June 1981.

It has been approved by the member bodies of the following countries :

Austria	France	Romania
Brazil	India	South Africa, Rep. of
China	Italy	Spain
Czechoslovakia	Philippines	United Kingdom
Egypt, Arab Rep. of	Poland	USSR

The member body of the following country expressed disapproval of the document on technical grounds :

Germany, F.R.
