Descriptors : chains, conveyor chains, flat-top chains, sprocket wheels, specifications, dimensions, nomenclature, designation, marking.

Price based on 9 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4348 was developed by Technical Committee ISO/TC 100, *Chains and chain wheels for power transmission and conveyors*.

This second edition was submitted directly to the ISO Council, in accordance with clause 6.11.2 of part 1 of the Directives for the technical work of ISO. It cancels and replaces the first edition (i.e. ISO 4348-1978), which had been approved by the member bodies of the following countries :

Australia	Italy	Sweden
Belgium	Japan	Turkey
Czechoslovakia	Korea, Rep. of	United Kingdom
Finland	Mexico	USA
France	Netherlands	USSR
Germany, F. R.	Romania	Yugoslavia
India	South Africa, Rep. of	
Ireland	Spain	

No member body expressed disapproval of the document.
