Vitreous and porcelain enamels — Determination of resistance to hot detergent solutions used for washing textiles

Émaux vitrifiés — Détermination de la résistance aux solutions chaudes de détergent utilisées pour le lavage des textiles

First edition — 1983-06-01

UDC 666.293 : 620.193.47

Ref. No. ISO 4533-1983 (E)

Descriptors : non-metallic coatings, porcelain enamels, vitreous enamels, tests, chemical resistance, detergents, washing, textiles.

Price based on 3 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4533 was developed by Technical Committee ISO/TC 107, *Metallic and other non-organic coatings*, and was circulated to the member bodies in February 1982.

It has been approved by the member bodies of the following countries:

Australia	India	South Africa, Rep. of
Czechoslovakia	Ireland	Spain
Egypt, Arab Rep. of	Italy	Sweden
France	Netherlands	Switzerland
Germany, F.R.	Poland	
Hungary	Romania	

The member bodies of the following countries expressed disapproval of the document on technical grounds:

United Kingdom
USA
