Manganese ores and concentrates — Determination of potassium and sodium content — Flame atomic emission spectrometric method

Minerais et concentrés de manganèse — Dosage du sodium et du potassium — Méthode par spectrométrie d'émission atomique de flamme

First edition — 1981-03-01

UDC 553.32 : 543.42 : 546.32/.33

Ref. No. ISO 4571-1981 (E)

Descriptors : manganese ores, tests, determination of content, potassium, sodium, spectrophotometric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4571 was developed by Technical Committee ISO/TC 65, *Manganese and chromium ores*, and was circulated to the member bodies in October 1979.

It has been approved by the member bodies of the following countries :

Austria	Hungary	South Africa, Rep. of
Bulgaria	India	Thailand
China	Italy	United Kingdom
Czechoslovakia	Japan	USSR
Egypt, Arab Rep. of	Poland	
France	Romania	

No member body expressed disapproval of the document.
