Second edition
1995-05-15

Textile glass — Woven fabric — Determination of tensile breaking force and elongation at break by the strip method

*Verre textile — Tissus — Détermination de la force de rupture en traction
et de l'allongement à la rupture par la méthode de la bande*

Reference number
ISO 4606:1995(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 4606 was prepared by Technical Committee ISO/TC 61, *Plastics*, Subcommittee SC 13, *Composites and reinforcement fibres*.

This second edition cancels and replaces the first edition (ISO 4606:1979), of which it constitutes a technical revision.

Annex A of this International Standard is for information only.
