Iron ores — Determination of calcium and/or magnesium contents — Flame atomic absorption spectrometric method

Minerais de fer — Dosage du calcium et du magnésium — Méthode par spectrométrie d'absorption atomique dans la flamme

First edition — 1980-06-01

UDC 553.31 : 543.422 : 546.41 + 546.46

Ref. No. ISO 4692-1980 (E)

Descriptors : iron ores, chemical analysis, determination of content, calcium, magnesium, (atomic absorption spectroscopic analysis), test results.

Price based on 7 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4692 was developed by Technical Committee ISO/TC 102, *Iron ores*, and was circulated to the member bodies in June 1978.

It has been approved by the member bodies of the following countries :

Australia	India	Poland
Austria	Iran	Romania
Bulgaria	Ireland	South Africa, Rep. of
Canada	Italy	Sweden
Chile	Japan	United Kingdom
Czechoslovakia	Korea, Dem. P. Rep. of	USA
Egypt, Arab Rep. of	Mexico	USSR
France	Netherlands	
Germany, F. R.	New Zealand	

No member body expressed disapproval of the document.
