Copper and copper alloys — Determination of chromium content — Flame atomic absorption spectrometric method

Cuivre et alliages de cuivre — Dosage du chrome — Méthode par spectrométrie d'absorption atomique dans la flamme

First edition — 1984-06-01

UDC 669.3 : 543.422 : 546.76

Ref. No. ISO 4744-1984 (E)

Descriptors : copper, copper alloys, chemical analysis, determination of content, chromium, atomic absorption method.

Price based on 3 pages

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 4744 was developed by Technical Committee ISO/TC 28, *Copper and copper alloys*, and was circulated to the member bodies in December 1981.

It has been approved by the member bodies of the following countries :

Australia	Hungary	South Africa, Rep. of
Austria	India	Spain
Belgium	Italy	Sweden
Bulgaria	Japan	Switzerland
Canada	Korea, Dem. P. Rep. of	Thailand
China	Korea, Rep. of	Turkey
Czechoslovakia	Netherlands	United Kingdom
Egypt, Arab Rep. of	Norway	USSR
France	Poland	
Germany, F.R.	Romania	

The member body of the following country expressed disapproval of the document on technical grounds :

USA
