Implants for surgery — Skeletal pins and wires —

Part 3: Kirschner skeletal wires

*Implants chirurgicaux — Fils et broches pour os —
Partie 3: Fils pour os de type Kirschner*

Reference number
ISO 5838-3:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 5838-3 was prepared by Technical Committee ISO/TC 150, *Implants for surgery*, Sub-Committee SC 5, *Osteosynthesis*.

ISO 5838 consists of the following parts, under the general title *Implants for surgery — Skeletal pins and wires*:

- *Part 1: Material and mechanical requirements*
- *Part 2: Steinmann skeletal pins — Dimensions*
- *Part 3: Kirschner skeletal wires*

Annex A of this part of ISO 5838 is for information only.
