General method for determination of silicon content — Reduced molybdosilicate spectrophotometric method

Méthode générale de dosage du silicium — Méthode spectrophotométrique au molybdosilicate réduit

First edition — 1981-11-01

UDC 543.422 : 546.284-31

Ref. No. ISO 6382-1981 (E)

Descriptors : chemical compounds, tests, determination of content, silicon, spectrophotometric analysis, calibrating.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 6382 was developed by Technical Committee ISO/TC 47, *Chemistry*, and was circulated to the member bodies in October 1979.

It has been approved by the member bodies of the following countries :

Australia	Egypt, Arab Rep. of	Poland
Austria	France	Portugal
Belgium	Germany, F.R.	Romania
Brazil	Hungary	South Africa, Rep. of
Bulgaria	India	Switzerland
Canada	Italy	United Kingdom
China	Korea, Rep. of	USSR
Czechoslovakia	Netherlands	Yugoslavia

No member body expressed disapproval of the document.

This International Standard was also approved by the International Union of Pure and Applied Chemistry (IUPAC).
