Nickel alloys — Flame atomic absorption spectrometric analysis —

Part 4:

Determination of copper content

*Alliages de nickel — Analyse par spectrométrie d'absorption atomique
dans la flamme —*

Partie 4: Dosage du cuivre

Reference number
ISO 7530 4:1990(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 7530-4 was prepared by Technical Committee ISO/TC 155, *Nickel and nickel alloys*.

ISO 7530 consists of the following parts, under the general title *Nickel alloys -- Flame atomic absorption spectrometric analysis*:

- *Part 1: General requirements and sample dissolution*
- *Part 2: Determination of cobalt content*
- *Part 3: Determination of chromium content*
- *Part 4: Determination of copper content*
- *Part 5: Determination of iron content*
- *Part 6: Determination of manganese content*
- *Part 7: Determination of aluminium content*
- *Part 8: Determination of silicon content*
- *Part 9: Determination of vanadium content*
