Manganese ores and concentrates — Determination of titanium content — 4,4'-Diantipyrylmethane spectrometric method

Minerais et concentrés de manganèse — Dosage du titane — Méthode spectrométrique au diantipyrylméthane-4,4'

First edition — 1984-05-15

UDC 553.32 : 543.42 : 546.82

Ref. No. ISO 7723-1984 (E)

Descriptors : manganese ores, chemical analysis, determination of content, titanium, spectrophotometric analysis.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been authorized has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 7723 was developed by Technical Committee ISO/TC 65, *Manganese and chromium ores*, and was circulated to the member bodies in February 1983.

It has been approved by the member bodies of the following countries:

Australia	Germany, F.R.	Romania
Austria	India	South Africa, Rep. of
Bulgaria	Italy	United Kingdom
China	Japan	USSR
Czechoslovakia	Mexico	
France	Poland	

No member body expressed disapproval of the document.
