Aircraft — Terminal junction systems — **Part 4:** Detail specification for type 2 system

Aéronefs — Systèmes de raccordement à modules amovibles —
Partie 4 Spécification détaillée pour le système du type 2

Reference number
ISO 8668-4:1993(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 8668-4 was prepared by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, Sub-Committee SC 1, *Aerospace electrical requirements*.

ISO 8668 consists of the following parts, under the general title *Aircraft — Terminal junction systems*:

- *Part 1: Characteristics*
- *Part 2: Tests*
- *Part 3: Detail specification for type 1 system*
- *Part 4: Detail specification for type 2 system*
- *Part 5: Detail specification for type 3 system*
- *Part 6: Detail specification for type 4 system*
