Seamless steel tubes for pressure purposes — Technical delivery conditions —

Part 1 :

**Unalloyed steels with specified room temperature
properties**

*Tubes sans soudure en acier pour service sous pression — Conditions techniques
de livraison —*

Partie 1 : Aciers non alliés avec caractéristiques spécifiées à température ambiante

Reference number
ISO 9329-1 : 1989 (E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council. They are approved in accordance with ISO procedures requiring at least 75 % approval by the member bodies voting.

International Standard ISO 9329-1 was prepared by Technical Committee ISO/TC 17, *Steel*.

It cancels and replaces ISO 2604-2 : 1975, of which it constitutes a technical revision, together with parts 2, 3 and 4 of ISO 9329.

ISO 9329 consists of the following parts, under the general title *Seamless steel tubes for pressure purposes — Technical delivery conditions* :

- *Part 1 : Unalloyed steels with specified room temperature properties*
- *Part 2 : Unalloyed and alloyed steels with specified elevated temperature properties*
- *Part 3 : Unalloyed and alloyed steels with specified low temperature properties*
- *Part 4 : Austenitic stainless steels*

Annex A of this part of ISO 9329 is for information only.
