Shipbuilding and marine structures — Rungs for dog-step ladders

*Construction navale et structures maritimes — Échelons pour
marchepieds*

Reference number
ISO 9519:1990(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9519 was prepared by Technical Committee ISO/TC 8, *Shipbuilding and marine structures*.

This first edition cancels and replaces the first edition of ISO 5487:1981; basically a technical revision of this, it retains the main dimensions of rungs for superstructures (which accord with the ILO Minimum requirements for hold ladders) but extends it, notably in the code letters, more precise material requirements (clause 4), surface finish (5.2) and tolerances (6.3).
