Measurement of liquid flow in open channels — Tracer dilution methods for the measurement of steady flow —

Part 1: General

*Mesure de débit des liquides dans les canaux découverts — Méthodes
de dilution en régime permanent utilisant des traceurs —*

Partie 1: Généralités

Contents

	Page
1 Scope	1
2 Normative reference	1
3 Definitions	1
4 Symbols and units	2
4.1 Symbols	2
4.2 Subscripts	3
4.3 Units of measurement	3
5 Principles of the different dilution methods	3
5.1 Constant rate injection method	3
5.2 Sudden injection method	4
6 Characteristics common to both methods	4
6.1 General formula for the calculation of discharge	4
6.2 Separate determination of tracer concentrations in the channel and in the injection solution	4
6.3 Direct determination of the dilution factor	5
6.4 Influence of background — Clarification	7
6.5 Accuracy and limitations of the dilution method	8
7 Choice of tracer	9
7.1 Characteristics required of a measuring tracer	9
7.2 Criteria for comparison	9
8 Choice of measuring reach	10
8.1 General considerations on the choice of a site	10
8.2 Preliminary tests and calculations	11
9 Procedure for the constant rate injection method	17
9.1 Preparation of the injection solution	17
