**Raw optical glass — Resistance to attack by
aqueous alkaline phosphate-containing
detergent solutions at 50 °C — Testing and
classification**

*Verre d'optique brut — Résistance à l'attaque par des solutions
aqueuses de détergent contenant du phosphate alcalin à 50 °C — Essai
et classification*

Reference number
ISO 9689:1990(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9689 was prepared by Technical Committee ISO/TC 172, *Optics and optical instruments*.

It is based on a test method approved by the International Optical Glass Expert Group of Technical Committee 2 "Chemical durability and analysis" of the International Commission on Glass (ICG/TC 2).

Annex A of this International Standard is for information only.
