Anaesthesia and respiratory care alarm signals —

Part 1: Visual alarm signals

*Signaux d'alarme pour soins d'anesthésie et respiratoires —
Partie 1: Signaux d'alarme visuels*

Reference number
ISO 9703-1:1992(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9703-1 was prepared by Technical Committee ISO/TC 121, *Anaesthetic and respiratory equipment*, Sub-Committee SC 3, *Lung ventilators and related equipment*.

ISO 9703 consists of the following parts, under the general title *Anaesthesia and respiratory care alarm signals*:

- *Part 1: Visual alarm signals*
- *Part 2: Auditory alarm signals*

(The Introduction gives information about the future ISO 9703-2.)

Annex A of this part of ISO 9703 is for information only.
