## **Ambient air — Determination of the particulate lead content of aerosols collected on filters — Atomic absorption spectrometric method**

*Air ambiant — Dosage du plomb dans les particules d'aérosol collectées  
sur des filtres — Méthode par spectrométrie d'absorption atomique*

Reference number  
ISO 9855:1993(E)

## Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9855 was prepared by Technical Committee ISO/TC 146, *Air quality*, Sub-Committee SC 3, *Ambient atmospheres*.

Annexes A, B and C form an integral part of this International Standard.
