Optics and optical instruments — Contact lenses —

Part 1:

Determination of oxygen permeability and transmissibility by the FATT method

Optique et instruments d'optique — Lentilles de contact —

Partie 1: Détermination de la perméabilité à l'oxygène et de la transmissibilité de l'oxygène avec la méthode FATT

Reference number
ISO 9913-1:1996(E)

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

Draft International Standards adopted by the technical committees are circulated to the member bodies for voting. Publication as an International Standard requires approval by at least 75 % of the member bodies casting a vote.

International Standard ISO 9913-1 was prepared by Technical Committee ISO/TC 172, *Optics and optical instruments*, Subcommittee SC 7, *Ophthalmic optics and instruments*.

ISO 9913 consists of the following parts, under the general title *Optics and optical instruments — Contact lenses*:

- *Part 1: Determination of oxygen permeability and transmissibility by the FATT method*
- *Part 2: Determination of oxygen permeability and transmissibility by the coulometric method*

Annex A forms an integral part of this part of ISO 9913. Annexes B and C are for information only.
